

Feedback on report

Dear Katelynn and Lily, I found your report to be the best one! You did an amazing job.

A couple of comments I have:

- I found your Abstract to be extremely clear –my only notes are that it would be good (and in fact necessary for a paper) to accompany estimates with their confidence intervals, and to mention possible unobserved confounders that could explain unexpected results for alcohol and smoking behaviors.
- I would like to emphasize the great, especially reproducible description of your model selection.
